Vehicle Request Management and Billing System

Description

Application GOFER is designed to organize the corporate passenger transport process. Vehicle requests by company staff will be managed and vehicles will be assigned appropriately. Driver payments will be prepared based on requests automatically for ease of preparation and accuracy. Organize, share and minimize vehicle usage by pre-programable levels of vehicle visibility. User roles are designed to enable organization to be able to customize system as per their precise requirements.

Corporate admin functions:

System configuration to meet the requirements of all branches and all transport activities of the company. This will enable look at overall operation and take decisions to share vehicles where possible, minimize number of vehicles in use, optimize productivity and minimize cost. This function will enable ability to provide visibility of vehicles to each branch or global view and share vehicles with changing requirements. Set, update and change all functions below this level from a central point.

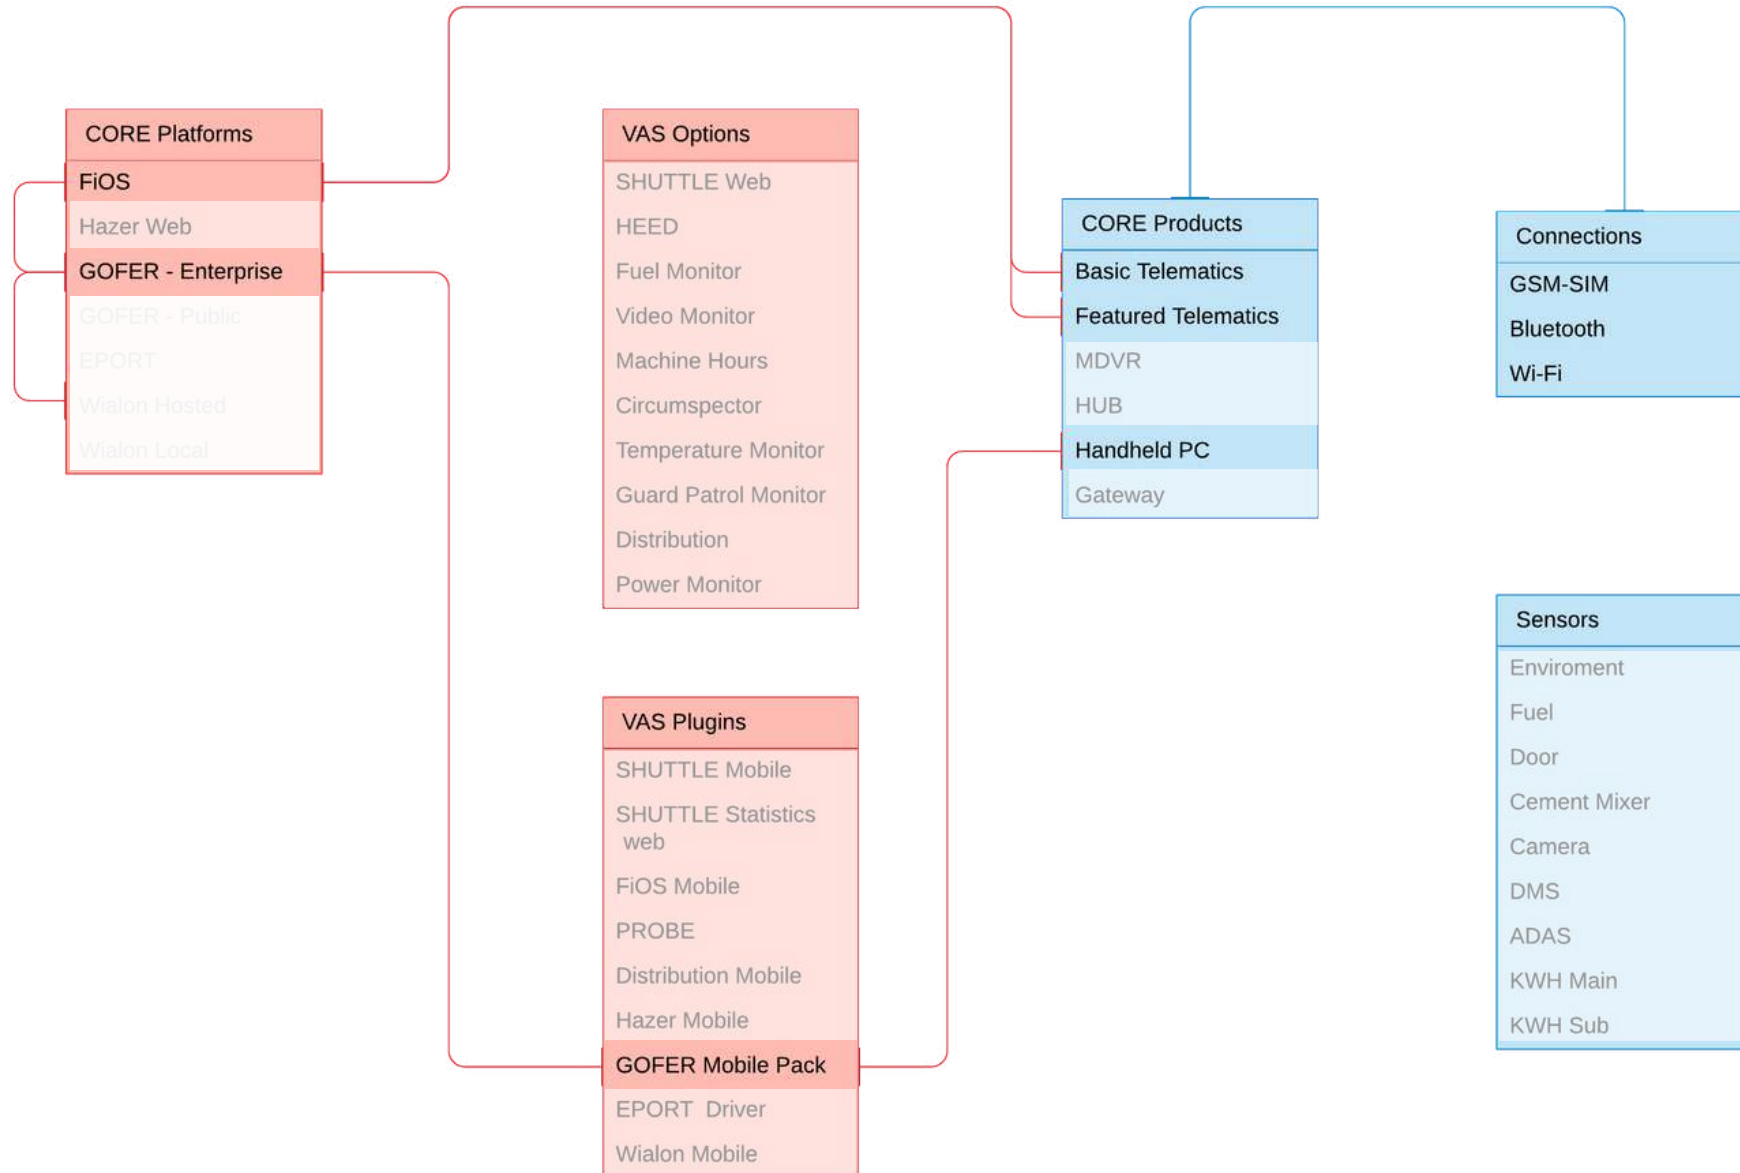

Branch admin functions:

This role will have full control over the branch or each site related activities. Setting rates, paying methods, vehicle types etc can be configured for the branch. All activities of lower roles can also be carried out from this role.
