KLOUD-Distribution

Logistics/Distribution Platform with POD

KLOUDiP

Description

The Distribution solution ensures effective order management and delivery process monitoring. It comprises a web-interface for dispatchers and a mobile app for the delivery staff.

Web interface ensures effective operating procedure management

● Order placement - Create or import orders with detailed description.

● Planning and distribution - Select orders, vehicles and generate routes in a handy interface.

● Route optimization - Get preliminary routes comprising data on the estimated arrival time and mileage;

● Delivery process coordination - Receive notifications and address the emerging issues via phone calls or a chat.
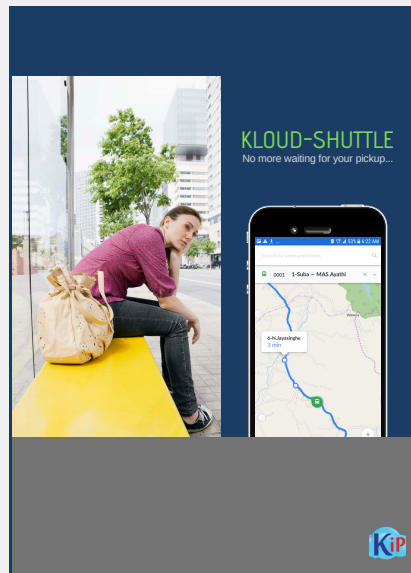

Power of mobile

Mobile app is designed for delivery staff and other mobile employees

- View the list of orders with detailed information.
- Track and evaluate delivery progress.
- Observe orders and preliminary routes on the map.
- Build a route to a delivery point with external navigation apps.
- Assign order statuses, add comments and photos.
- Notify dispatchers of the events and make calls to clients.
- Confirm a delivery by attaching a customer signature.
- Turns delivery staff smartphones into a trackers.
- Receive push-notifications on orders, routes, and delivery process.
